

Things Notes In Bear Advanced

!!!

Welcome to Things Note in Bear Advanced!

The idea originated from [Craig eley \(@craigeley\) | Twitter](#). Thanks for the initial offer!

Since I'm working a lot with tags in Bear and Deadlines in Things, I decided to upgrade the Bear script.

Usage

For Things to recognize the tags, you have to first create them in Things. This is great, since you can then choose different tags for Bear and Things. E.g.

`programming` for Things and `programming/python/pip` for Bear.

Otherwise everything else works as expected, you enter your note, it creates a Bear note and a correspondent Things note with the date you set.

You can download the workflow here: <https://workflow.is/workflows/081e6dbf6bd34e139322b2df39c9bcea>

Hope you like the script workflow!
